

Metro Galaxy

Decentralized Metaverse
And Gamified Online Virtual World

Introduction

What MetroGalaxy wants to bring to the table is an Decentralized Virtual World that combines the best out of a strong development team with blockchain experience, a unique style and an active community that will eventually build the world themselves. We have a lot of unique advantages:

- Being a gamified virtual world and social platform for crypto enthusiasts, MetroGalaxy goes outside the range of your typical NFT games.
- The community can build their own MetroGalaxy areas, assets, mini-games and get rewarded for their contribution, which aids greatly in Metroverse's self-sustaining growth, expansion and product stickiness.
- An NFT reward mechanism that encourages users to interact with the world AND each other, making it not just a one-way emotional connection between the player & the world.
- A strong and active user base that will allow monetization through advertising and sponsorship from both MetroGalaxy users and partners, from crypto projects to non-crypto businesses.

What Is MetroGalaxy

MetroGalaxy

MetroGalaxy is a metaverse project that uniquely blends a social platform together with an online virtual game that lets its players role-play as anyone they want, do anything they want in an ever-expanding decentralized world. Currently it is being developed on Avalanche.

MetroGalaxy World

The world of MetroGalaxy consists of various areas, each with a unique and immersive design. Players can interact with different elements in each area (e.g. enter a building, play mini-games, interact with NPCs or integrated protocols, etc.) as well as interact with other players (e.g. chat, compete in mini-games, etc.) given the right conditions.

Hello world, my first code in here!

A Galaxy Of Activities

- Play Games with Friends
- Own House NFTs
- Socialize
- Build your world
- Earn Rewards

Mini-Games And Quests

Players can enjoy various games and questlines with their friends throughout unique maps. Games differ in size and gameplay, ranging from small mini-games and social games that are unique to a specific map and player's chosen profession, to a fully fledged farming and resource gathering game in the next stages of development.

Socialize

A range of social activities to bolster the connection between players in our vast world:

- Chat, follow, and make friends with fellow Metronions
- Creating and sharing content directly from MetroGalaxy to a user's social media
- A full profession system players can choose to follow that varies from map to map
- In-game social apps, for example a Tinder-like dating feature

User Feed

MetroGalaxy's User Feed is a cute tweak we made to leverage the best of a social profile while still retain the information of your Metronions like a character screen in traditional RPGs.

Inside a profile, you can:

- Customize your avatar, quotations;
- Showcase your Metronions, their accessories, land NFTs, and how many METRO you hold;
- Add your real social media accounts like twitter, discord;
- Update your status inside the game;
- Allow friends and other people to follow your journey through the MetroGalaxy world.

The MetroGalaxy World • Build your world

The MetroGalaxy World • Build your world

Conceived By The Team, Built By The Community

While initially, the main development force will be the core MetroGalaxy team, we understand that with the support of our talented community, we can be even bigger. In the future phases of development, the community will have the means to be real builders behind the world of MetroGalaxy.

MetroGalaxy will have tools that support creators in a variety of ways:

- Game artists can design assets to be used in Metaverse maps;
- Game developers and designers can build maps and design quests, much like RPG Maker.

All contributors will be rewarded, and the more users engage with their maps and use their assets, the bigger the reward.

Earn Rewards

Rewards are given by participating in social activities, completing mini-games, finishing questlines inside MetroGalaxy. Rewards come in the form of in-game currency and crafting materials, which can be used to mint NFT accessories and home decorations. NFT can only be minted by burning a small amount of METRO token.

While very limited, users can also earn rewards directly in NFTs or METRO token by reaching certain milestones or placing top of our ranking system (ex. getting on top of social activity ranking or a mini-game monthly ranking).

Metronions - Citizens Of MetroGalaxy

Users can join MetroGalaxy as a citizen to socialize, explore the world, trade items and create their own virtual life. Each user has a character represented by an ERC721 NFT, which acts as a part of their digital identity.

There will only be 10,000 characters released at the beginning. We will classify the first 10,000 Metronions as the First Gen class. In the future, we will release different batches of characters that are of different races/traits compared to the 1st batch.

Mint Yourself Into The World

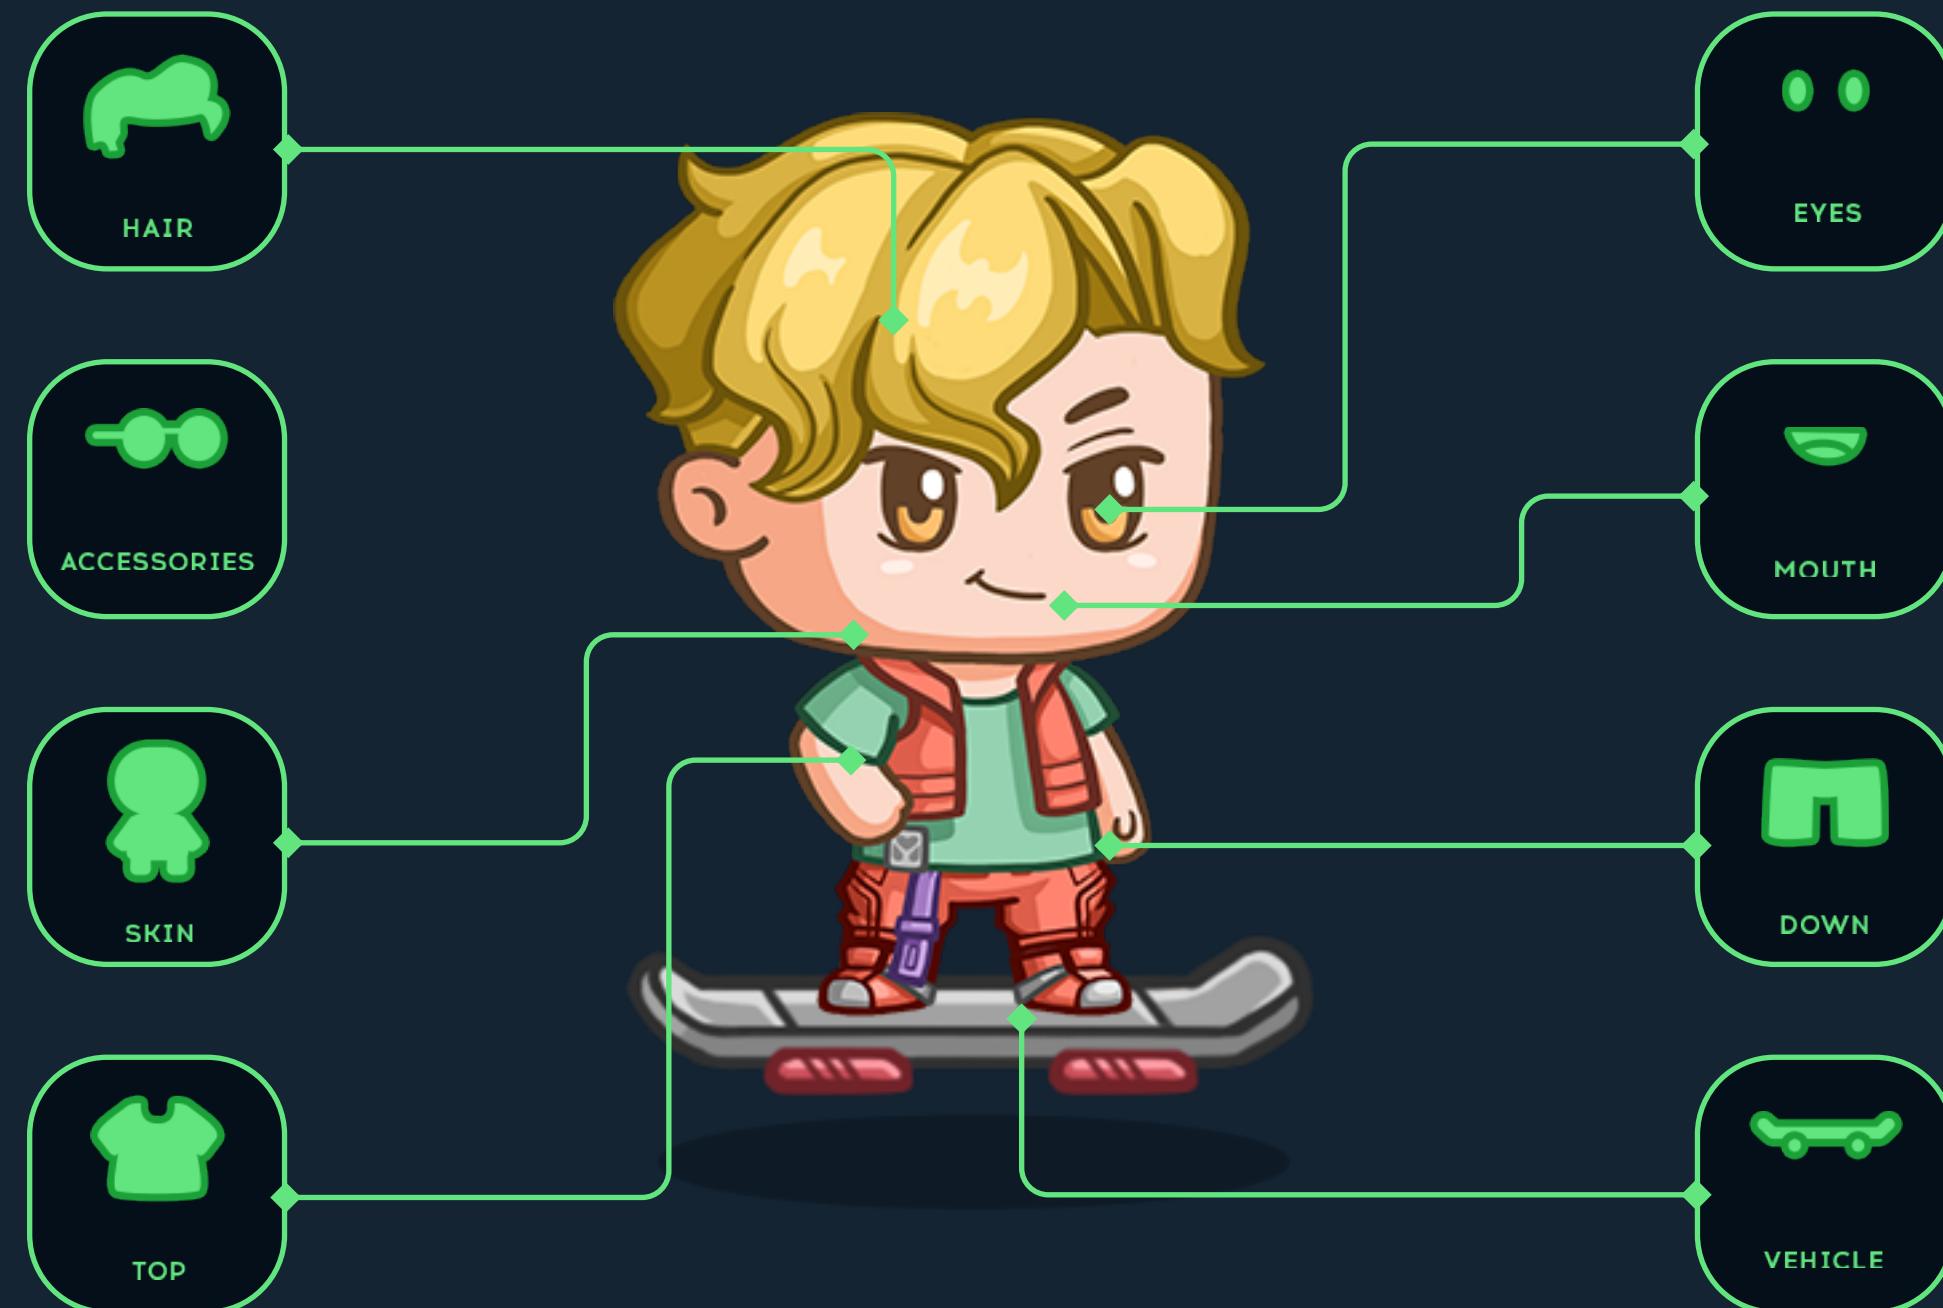

Mint

Metronions are randomly generated with different traits and will be revealed after the NFT sale period ends.

All Metronions come with basic accessories that can be changed by minting unique and limited accessories (ERC1155). These accessories are reflected directly in the Metronion's design in the NFT and in-game.

Accessories customization allows users to have a unique look that truly represents themselves and adds more value to their NFT. While limited in number, new accessories designs are updated constantly with different themes, and the options are limitless.

Metronions Body Parts

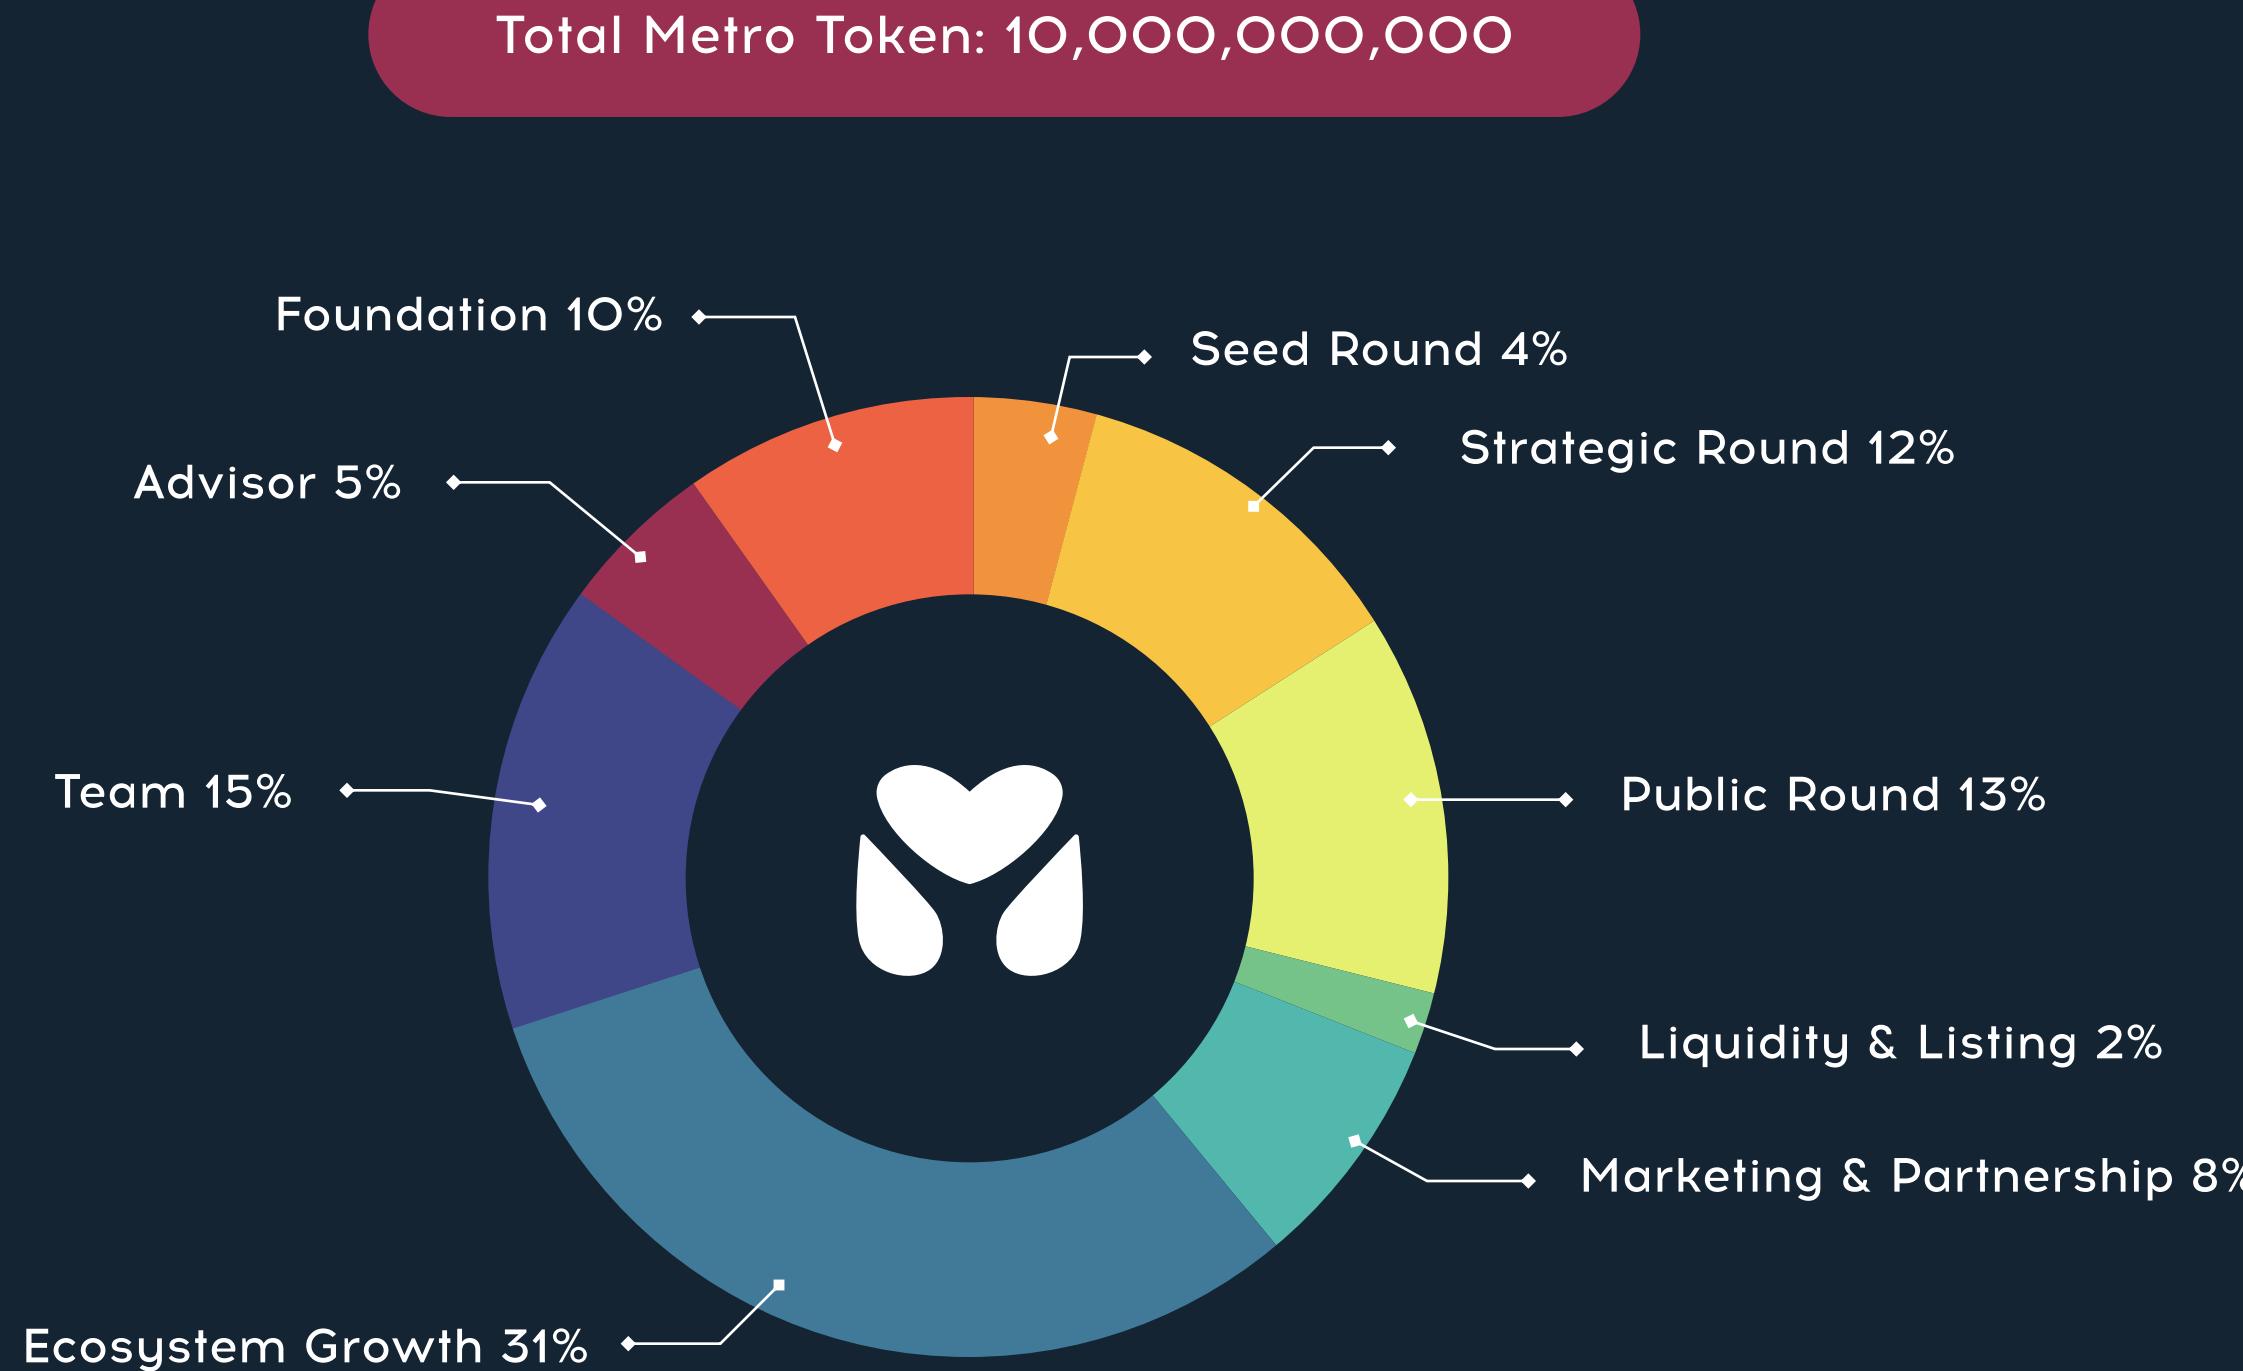

The METRO Token

Our Native Token METRO Is Used Throughout The System In A Number Of Ways:

- METRO is used in-game as native currency to facilitate quests and rewards.
- Staking:
 - Stake METRO to earn mystery box rewards. Mystery boxes include seasonal clothes and accessories for Metronion, home decorations, and in-game boosters.
 - Stake METRO to guarantee a slot to buy Land NFT.
 - Partner projects can launch their NFT on METRO Staking vault.
- Marketing & Promotion - METRO will also be used to run incentive programs, event rewards and facilitate partnership ideas.
- Governance:
 - Token holders - can vote on small-scale decisions (new map themes, accessory themes, etc.)
 - Metroverse citizens (holding both METRO token and Metronion NFT) - can vote on larger decisions, including:
 - All proposals that normal token holders can vote on
 - Next-gen Metronion minting strategy
 - Advertising and marketplace fees
